                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          à
                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a new method for identifying compounds for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases RICK, RIP, Nok-Interacting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligomucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present nucleic acid sequence encodes the human cellular kinase NIK (Nok-Interacting kinase) protein of the invention, as described above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CCTGCCTTTCTCCCCCCAACCCAAGGCTGACCTGTGTTCTCCCCAGGTCTGGGATTCTAAGT 183

```
The invention relates to a method of determining whether a patient will respond to treatment with a farnesyl transferase inhibitor (FTI), by analyzing the expression of gene that is differentially modulated in the presence of an FTI. The method is useful for determining whether a patient will respond to treatment with a FTI such as (B)-6-[amino(4-chlorophenyl) (1-methyl-1H-imidazol-5-yl)methyl]-4-(3-chlorophenyl) -1-methyl-2-(lH)quinolinone, monitoring the therapy of a patient, treating a patient with leukemia with FTI if the analysis indicates that the patient will respond. This sequence corresponds to a gene whose expression may be modulated in the presence of FTI.
                                                                                                                                                                                                         Determining whether a patient will respond to treatment with a farnesyl transferase inhibitor, by analyzing the expression of gene that is differentially modulated in the presence of the inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GGGGGACTGTGCCCGTGTGGGAACGTGTAGCTGTTGAGAGGTGGACTCTCTTACCATTGAGG

                                                                                                                                                                                       δ
                                                                                                                                                                                       The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level of expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient, to control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the diagnostic, prognostic and statistical methods of the invention. This sequence corresponds to a marker used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  543

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    421
                                                                                                                                                                                                                          are associated with carcinomes. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (GAP); (iii) for screening of a bioactive agent capable of modulating the activity of GAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of GAP; (vi) for treating carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA gene sequence. Note: This parent is an equivalent to basic patent US2002182586A1, for which no sequence data was published

WPI; 1999-094902/08

Screening agents for modulating interaction of nuclear factor kappab inducing kinase - with kinase-binding target, useful for controlling levels of the kinase, for treatment and diagnosis of conditions associated with e.g. inhibition of signal transduction by tumour necrosis

Disclosure; Col 11-14; 16pp; English.

This sequence encodes a novel human nuclear factor-kappaB (NFkB)-inducing kinase (NIK) which is used in a method for screening for agents that modulate the interaction of NIK with a NIK-binding target. The encoded protein can be used as a modulator of cellular functions at the NIK level, or for development of such compounds. NFkB is involved in expression of many immune and inflammatory responses and of some important viral genes. The protein may be used diagnostically and therapeutically, in conditions associated with abnormal utilisation of pathways that involve NFkB, e.g. inhibition of signal transduction by tumour necrosis factor (TNF)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated peptide comprising a specified 947 amino acid sequence - has e.g. kinase activity, kinase inhibitory activity, IKB kinase-alpha binding activity, and IKB kinase-alpha binding inhibitory activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          292 GAACTCCCCAAGCCAAAGGAGAAGACGCCGCCACTGGGGAAGAAAAAAGAGCTCCGTCTAC 351
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This cDNA encodes a nuclear factor kappa B (NF-kB)-inducing kinase (NIK) polypeptide. The NIK polypeptide or its fragment has one or more activity activities selected from kinase activity and inhibitory activity; IKB kinase-alpha and beta binding activity and binding inhibitory activity, tumour necrosis factor (TNF) receptor-associated factor 2 binding activity and binding inhibitory activity, IKB binding activity and binding inhibitory activity, NF-kB activity, IRB binding activity and binding inhibitory activity, NF-kB activity and binding inhibitory activity. The NIK nucleic acid and the polypeptide may be used in diagnosis (e.g. genetic hybridisation screen for NIK transcripts), therapy (e.g. NIK kinase inhibitors to inhibit TNF signal transduction), and in the biopharmaceutical industry (e.g. as immunogens, reagents for isolating other transcription regulators, and reagents for screening chemical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 ATGGCAGTGATGGAAATGGCCTGCCCAGGTGCCCCTGGCTCAGCAGGAGGAGGAAG

This DNA sequence codes for human wild-type NIK (see AAY31665), a NF-kB inducing kinase having serine/threonine kinase activity. The invention relates to: (a) an N-terminus deletion mutant NIK protein (see AAY31666); and (b) a kinase deficient NIK mutant protein (see AAY31666); that inhibits auto-phosphorylation or transphosphorylation. The invention provides the molecular basis for cytokine induction of N-kB-dependent immune and inflammatory responses, emphasising a role for both NIK-NIK and NIK-IKK (IkB-specific kinase) interactions. A novel and highly specific method for modulating NF-kB-dependent immune, inflammatory and anti-apoptotic responses is based on interruption of the critical protein interaction of NIK and IKK. The mutant NIK proteins are used in claimed methods for inhibiting NF-kB-dependent gene expression. The kinase-deficient NIK mutant proteins hinbit activation of IKK. The N-terminal deletion NIK mutant proteins bind to IKK, thus inhibiting NIK/IKK

The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a nucleotide

XX

Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.

PT comprises a nucleotide sequence.

XX

Claim 1; SEQ ID NO 884; Opp; English.

XX

The present invention relates to novel DNA and protein sequences which care associated with carcinomas. The sequences are useful for: (i) for screening of bioactive agent capable of continuous Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iii) for carcinoma; (vii) for inhibiting the activity of CAP; (iii) for treating carcinoma; (vii) for inhibiting the activity of CAP; (ix) sa a biochip; (c) for diagnosing carcinoma Associated (CA) gene copy number. In addition, the carcinoma are useful as DNA vaccines and the CAP; (ix) as a biochip; (c) for diagnosing carcinoma Associated (CA) gene copy number. In addition, the carcinoma including lymphoma. The present sequence is one such CA gene sequence. Note: This patent is an equivalent to basic patent

```
The present sequence encodes a protein designated NWP1, a TRAF2 binding protein. This protein contains Ser/Thr protein kinase motifs. A full length CDNA clone encoding NF-kappa8 (NIK) was obtained by PCR using the present clone, clone 10. The clone 10 protein is capable of binding to at class amino acids 222-501 of TRAF2. The TRAF2-2 binding proteins can be used for modulation or mediation in cells of the activity of NF-kappa8 or TRAF2. TRAF2-binding proteins are especially used for prevention or treatment of pathological conditions associated with NF-k8 induction, the transpersant cells or the pancreas that results in diabetes, the death of cells in graft rejection, the death of coligodendrocytes in the brain in multiple sclerosis, and AIDS inhibited T cell suicide which causes proliferation of the AIDS virtus and hence the AIDS disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2159 CTGCAGCGGAGCTGGGAGGGAAGGTGAACCGGGCACTACAGCAAGTGGGAGGTCTGAAGA 2218

The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (vi) for diagnosing carcinoma; (vi) for inhibiting the effect of CAP; (vi) for tracting carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma and propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed sequence tags for identifying expressed cartivity of (II) as useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in issue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in capposition for generating or other types of data and products dependent on DNA and and to acid sequences. Abs64197-Abs94564 represent novel human diagnostic coding sequences. Abs64197-Abs94564 represent novel human diagnostic coding sequences. Abs64197-Abs94564 represent novel human diagnostic coding sequences. Abseator from the printed specification, but was obtained in abectronic format directly from WIPO at the very sequences.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSDORT & vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
ALS56130 appiens HELA CELLS COT 25-NORMALIZED Homo sapiens CDNA clone CSODK011YM14 5-PRIME, mRNA sequence.
